What is Adderall?

Adderall is a prescription central nervous system (CNS) stimulant used to manage Attention Deficit Hyperactivity Disorder (ADHD) and narcolepsy. It combines amphetamine and dextroamphetamine to help improve focus, attention, alertness, and impulse control.

How Adderall Works

Adderall enhances brain activity by:

- Increasing dopamine and norepinephrine levels
 - Improving focus and attention span
 - Reducing hyperactive behavior
 - Supporting daytime wakefulness for narcolepsy patients
-
